## SUMMARY

My Name is Christopher Harris and I am an aspiring web developer and seeking employment in the field of information technology. I am seeking a potential role as a junior front end web developer or similar role entailing my current skills using HTML, CSS and JavaScript.

Since I am a self-taught programmer, I have no industry experience or working, collaborating and developing with a team. If applicable, I would be inclined to take on casual or weekend-based work in order to develop the skills necessary to provide value and perform at an industry level.

I have always had a solid interest in learning, research and developing new concepts. Provided with the accelerated rate in which software and tech are moving makes for an exciting career path as each day will bring forth a new emerging technology or challenge.

## EXPERIENCE

[November 2008 – January 2019]

[Currently Employed]

[**Woolworths Ltd – MLDC Warehouse**]

Casual Store person

### Responsibilities:

- > Pick packing, manual handling and creating and completing store orders.
- > RFID scanning and accommodating WMS software to sort and store pallets.
- > Side-load & front load machinery for loading orders onto trucks for delivery.
- > Cycle Counts involve checking warehouse locations for discrepancies in number of products, resupply hold up and general flow of warehouse inventory.

[2017 - Current]

[Personal Learning]

[**Online Resources, Coding Tutorials, books and coding**]

Portfolio: <https://bionic-fish.github.io>

### Design & Development:

- > Created with semantic HTML5 elements. Styled using latest CSS techniques and layout patterns
- > Responsive design mobile first techniques implemented, display content as a block element and full width of the user's devices width.
- > Responsive design desktop layout, Grid for personal work section and gallery section, flex for emulation section.
- > Developed a sticky navigation that appears after the initial landing page banner image
- > Developed JavaScript for the Map API and display from Google Maps
- > Provided grouped sections with accommodating designs and development techniques
